

KnockOut 2

In KnockOut 2, you can use the touch-up tools to recover foreground colors you removed during processing, or to remove background colors that remain after processing. This feature lets you correct masked images so that they are virtually indistinguishable from the originals.

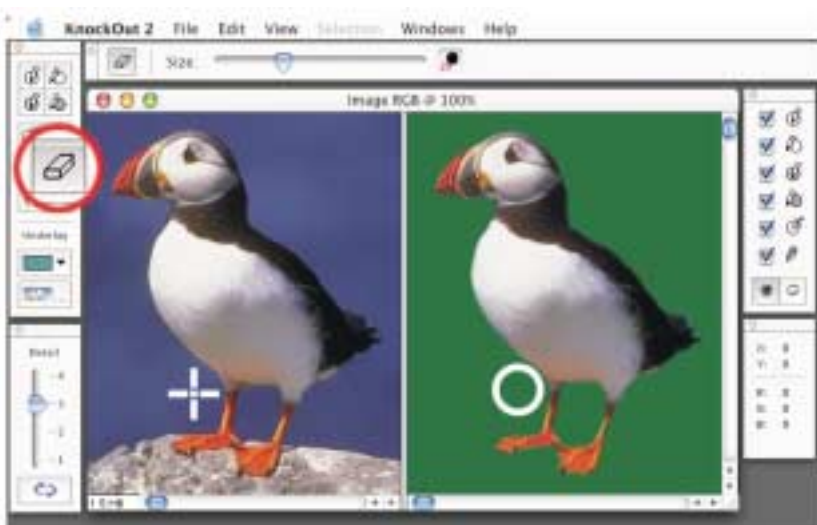

To recover colors removed during image processing

- 1 Click the **Touchup brush** tool in the toolbox.
- 2 Drag over image areas where you want to recover colors.

To remove colors after image processing

- 1 Click the **Touchup eraser** tool in the toolbox.
- 2 Drag over colors you want to remove.

Notes

When the **Touchup brush** tool or the **Touchup eraser** tool is enabled, split-screen mode is also enabled, and the original image and the knocked-out image display side by side.

Any edits made with the **Touchup brush** tool or the **Touchup eraser** tool are lost when you reprocess an image.
