

KnockOut 2

In KnockOut 2, you can create a straight selection line using points or by freehand. This makes it easier to mask large, complex images.

To create a straight selection line using points

- 1 Click a selection tool.
- 2 Enable the **Polygonal mode** check box on the property bar.
- 3 Click points in the image to create a selection line.

The points connect to form the selection line.

To create a straight selection line using freehand mode

- 1 Click a selection tool.
- 2 Begin drawing a selection line.
- 3 Press **Option** (Mac® OS) or **Alt** (Windows®), and click points to create a selection line.

This allows you to temporarily switch to the polygonal mode while in freehand mode.
