Digital Photo Album

Ulead® Photo Explorer 8.5

Acquire, Organize, Edit and Share all your Digital Media

What's New

The **Easy Access Window** lets beginners easily use the key functions of Photo Explorer. It shows you how to quickly download media files to your computer, how to edit and adjust pictures and video, and how to share their media with family and friends.

Automatic camera detection helps you save more time by importing and saving your photos to your computer in one simple step. It can also take you to CD & DVD PictureShow 3 to create dynamic slideshows in the least amount of time.

With **Create Albums** you can collect images, video or music clips into a central album to more easily keep track of files. Customize these albums according to special occasions or show all folders at the same time.

Album Calendar View lets you view photos by the date they were taken. Simply click on a selected date in the calendar and see all pictures from that date. The calendar also shows the total amount of photos or video according to the date.

Auto-Fix functions help you repair common photo problems automatically using Auto Level, Adjust, Color and Contrast. The auto commands can be applied to a single image or to multiple images at the same time with just one click using the Batch command.

Trim Video Clips to remove unwanted segments from videos or even commercials from recorded TV shows. Enhanced in this version is the ability to trim out multiple segments from a video at the same time.

Export Slideshows as a Video File gives you another choice to share your slideshows with family and friends. Besides burning to disc, now you can export your slideshow as a video file. You can then send the video by email or even use the video file as part of a CD & DVD PictureShow 3 slideshow project.
