

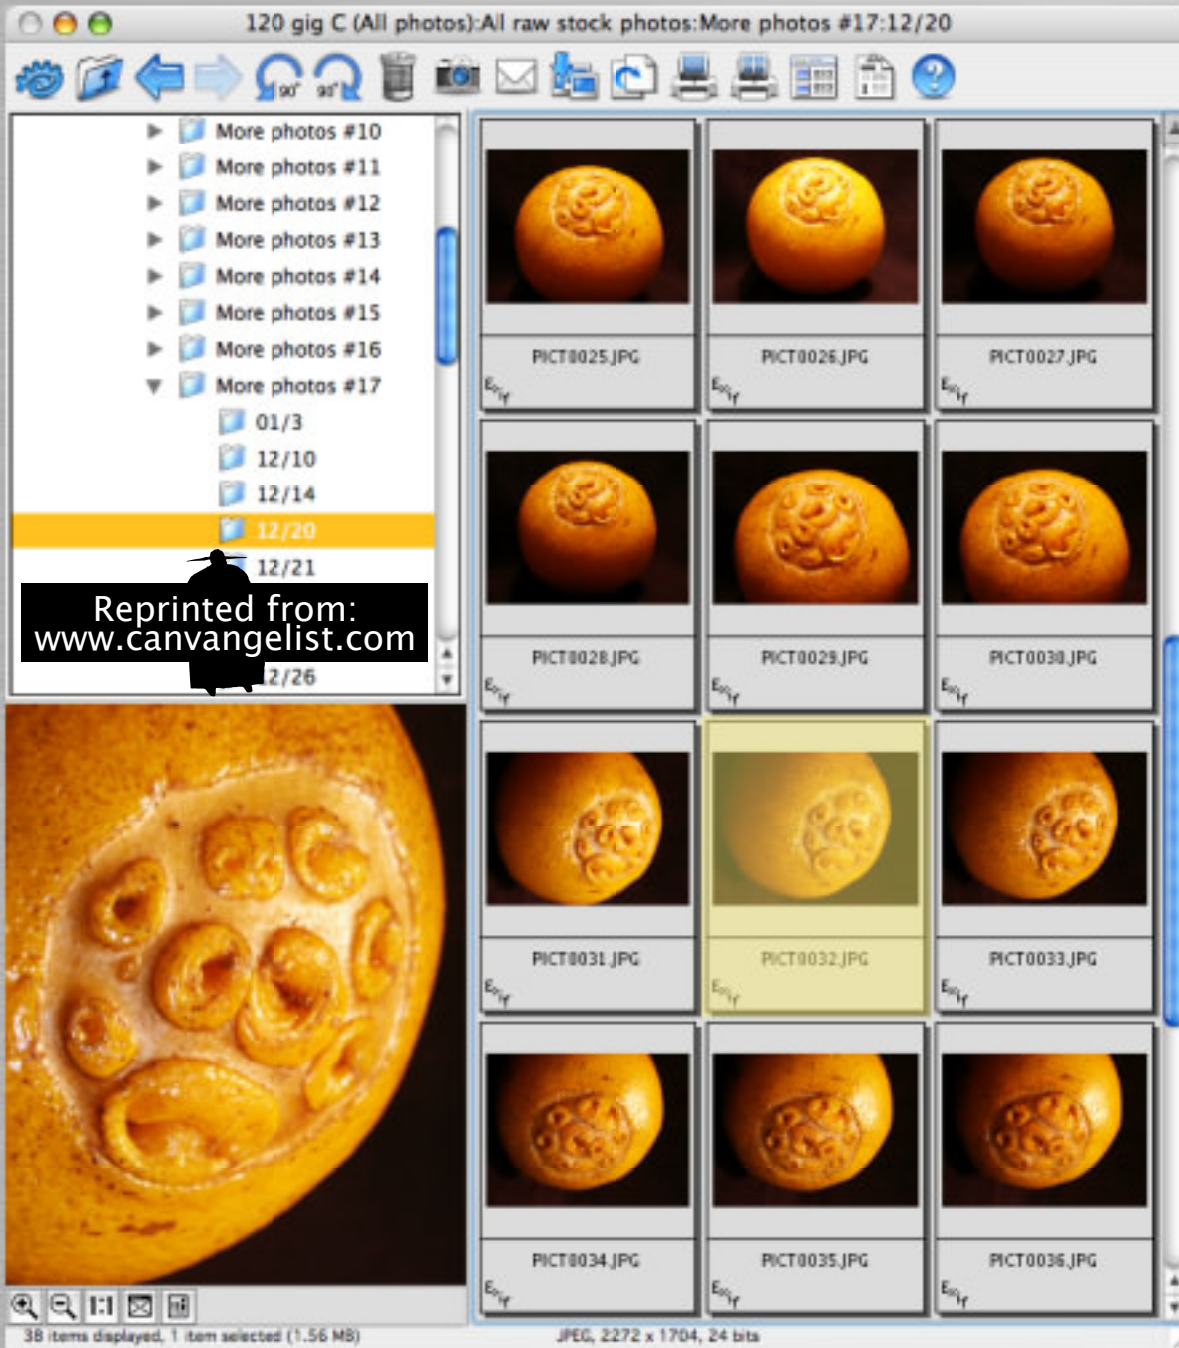

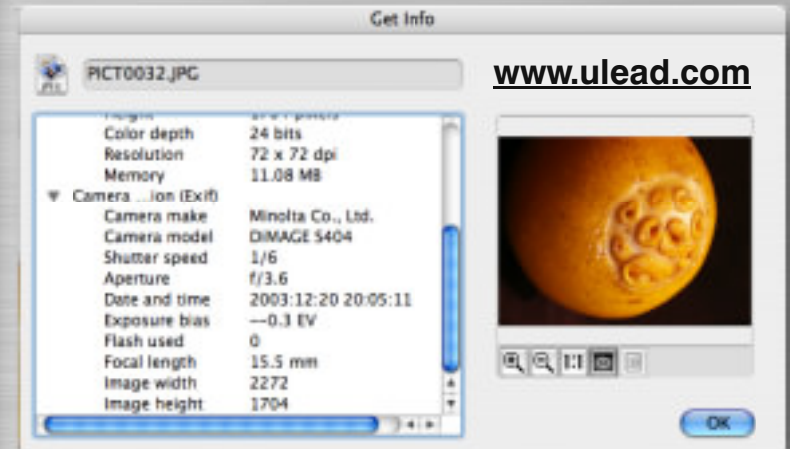

Photo Explorer for MAC

Reprinted from:
www.canvangelist.com

Above, I am using the Viewer feature to navigate through a group of images of the Mutant Orange From Florida.

Ulead Photo Explorer (also available for Windows) is really three applications in one. Import photos from your digital camera or scanner, then organize them. Browse and play your multimedia files (images, videos, animated GIFs, sound) without needing to open them first! Adjust your images by editing EXIF metadata, and add text. Print images according to provided layouts and create calendars.

Create slide shows with transitions that include video clips. Finally, create web-based thumbnails and slideshows with accompanying HTML. Explore your photos!
