

## **Roxio Secure Burn Enables Government and Corporate Clients to Secure Confidential Information Saved to Portable Media**

***According to the 2014-15 Privacy Act Annual Report to Parliament, government departments and agencies need to improve how portable storage devices are managed, while protecting data and reducing the number of breaches.***

**Ottawa, ON – February 3, 2016** – [Roxio® Secure Burn™ Enterprise](#) is a complete data burning solution that enables government, corporate and institutional customers to monitor, control and protect confidential information saved to storage discs and devices. Government and corporate accounts can use Roxio Secure Burn Enterprise to keep information safe by taking advantage of powerful administrative tools that help IT departments establish and enforce security protocols. FIPS 140-2 compliance allows organizations to meet government requirements, while drag and drop tools make it easy for employees to burn to CD, DVD, Blu-ray Discs as well as memory cards and USB drives.

“Last month, the [Privacy Commissioner of Canada](#) urged federal departments and agencies to develop and implement more rigorous procedures and safeguards to protect Canadians’ personal information. In the 2014-15 Privacy Act Annual Report to Parliament, it was found that more than 90 per cent of audited institutions did not track all portable storage devices throughout their lifecycle and a quarter did not enforce the use of encrypted USB storage devices,” said Michel Yavercovski, Senior Director of Roxio products at Corel.

“With statistics like this, securing portable media is a growing concern that governments and companies can’t afford to ignore. Roxio Secure Burn is an affordable solution that enables clients to be sure that confidential information is secured no matter where users take—or leave—USBs and discs,” added Yavercovski.

**Roxio Secure Burn Enterprise enables government and corporate accounts to protect data saved to removable media, prevent data breaches and help ensure compliance with data privacy requirements:**

- **Easy burning to removable media:** Whether employees are working with CDs, DVDs, Blu-ray Discs or USB drives, Secure Burn Enterprise makes burning as simple as dragging and dropping files. Users can easily burn single or multiple discs. The Edit File list offers additional options for adding and removing files, and adding new folders.
- **Secure data with powerful encryption:** Support for FIPS 140-2 certified encryption and password protection gives the tools to ensure compliance with security standards, and avoids compromising valuable company and customer information.
- **Ensure employee compliance:** Secure Burn Enterprise takes the burden of compliance off employees. With encryption protocols enforced by IT, users can burn files to removable media while automatically following company security policies.

- **Powerful Administrative Tools:** IT departments can monitor and control burning and encryption within their organization and create enforceable security measures including the use of 256-bit data encryption, activity and access logging, password protocols, read/write permissions and more.
